Performance

Wallpaper Engine aims to deliver an entertaining experience while using as few system resources as possible. You can choose to automatically pause or completely stop the wallpaper while using another application or playing fullscreen (including borderless windowed mode) to not distract or hinder you while playing a game or working. Many options to tweak quality and performance allow you to make Wallpaper Engine fit your computer perfectly. As a general rule of thumb, 3D, 2D and video based wallpapers will perform best, while websites and applications will require more resources from your system. Having a dedicated GPU is highly recommended, but not required.

Workshop

Choose from over 350.000 free wallpapers from the Steam Workshop with new wallpapers being uploaded every day! Can't find a wallpaper that fits your mood? Let your imagination go wild by using the Wallpaper Engine Editor to create your own animated wallpapers from images, videos, websites or applications. A large selection of presets and effects allow you to animate your own images and share them on the Steam Workshop or to just use them for yourself.
